American Express

Engineer III Tokyo, Japan. September 2022 ~ Present

I joined American Express as an Individual Contributor, contributing to the development of the new Guest portal for the Pocket Concierge business unit. Following the departure of the engineering manager and technical lead, I assumed leadership of this project and others, driving the team to adopt and embrace improved development practices.

- Saved hundreds of thousands in USD on fees and unreconcilable charges via improvements in our Stripe Integrations.
- Implemented and optimized a GraphQL API, reducing query times by up to 50%.
- Instituted feature ownership paradigms to prevent miscommunication.
- Developed processes to track issues and transparently evaluate engineering quality.

Le Wagon

Teaching Assistant Tokyo, Japan. January 2022 ~ Present

I support students during product sprints by teaching and reinforcing practical development cycle practices. I assist them in tackling bugs and bridging knowledge gaps. My efforts have resulted in overwhelmingly positive feedback from students, who frequently commend my problem-solving skills, patience, and ability to make coding less intimidating. Feedback:

- "Good, very helpful and patient, good problem-solving skills and taking time to explain everything."
- "Great listener and helps at guiding the student through the problem at hand. Makes coding less intimidating for newbies."

Shippio Inc

Engineering Manager Tokyo, Japan. October 2019 ~ September 2022

My first role as an engineer showcased my excellence and rapid career progression. I quickly advanced to Scrum Master, Project Manager, and finally Engineering Manager. As employee number 16, I played a pivotal role during a period of massive expansion, contributing to a 10x growth in the company over my tenure. My responsibilities included directly managing a team of four engineers and leading the implementation of key projects. I left Shippio to seek new challenges and further technical development opportunities.

- Directly managed and mentored a team of four engineers, fostering their professional development.
- Designed and implemented a shipment tracking system that provided a distinct market advantage by resolving a significant customer pain point.

Skills

English	Native
Japanese	N2 / Conversational
Ruby	5+ years
Rails	5+ years
Graphql	5+ years
Postgresql	5+ years
Javascript	5+ years
Heroku	3+ years
AWS	2+ years
React	1+ years

Education

Le Wagon, Tokyo
9 Week intensive coding bootcamp for Ruby on Rails web development
University of Missouri
BA in Linguistics and Japanese Studies

Additional Work

Experience

English Teacher 2012~2019

I taught children English in Japan for seven years, honing my communication and teaching skills. I developed lesson plans, managed classrooms, and provided feedback to students and parents.

Laboratory Technician

2006~2009

For the three years between my highschool and college careers, I performed routine maintenance and aided in experimentation for a CDC and FDA certified laboratory.
